Background

Primary care physicians (PCP) workforce shortages challenge the long term viability of U.S. primary care, a foundation of the Triple Aim for U.S. health care. The Triple Aim envisions primary care as an integrating component working across its three goals of improving the quality of care, improving health of populations, and reducing per capita health care costs.¹ Studies of the future need for primary care providers indicate that demographic and policy trends will only strain a workforce already struggling to meet national needs.² Other analyses document geographic maldistribution of PCPs, within states as well as across states.³ Addressing both physician shortages and maldistribution requires analysis and action on the state level.

Methods. The Robert Graham Center projected the Nevada PCP workforce necessary to maintain current primary care utilization rates, accounting for increased demand due to aging, population growth, and an increasingly insured population due to the Affordable Care Act (ACA). Primary care use was estimated with 2010 Medical Expenditure Panel Survey (MEPS) data. Current active PCPs within Nevada were identified using the 2010 American Medical Association (AMA) Masterfile, adjusting for retirees and physicians with a primary care specialty but not practicing in primary care settings. Nevada population projections are from the Census Bureau’s 2005 projections based on the 2000 Census.⁴

Workforce Projections 2010-2030

To maintain current rates of utilization, Nevada will need an additional 1,113 primary care physicians by 2030, a 77% increase compared to the state’s current (as of 2010) 1,428 PCP workforce.

Nevada Projected Primary Care Physicians Need

Implications for Nevada

To maintain the status quo, Nevada will require an additional 1,113 primary care physicians by 2030, a 77% increase of the state's current (as of 2010) 1,428 practicing PCPs. The current population to PCP ratio of 1883:1 is greater than the national average of 1463:1. The 2030 projection stands above the West overall and above the nation overall. Components of Nevada’s increased need for PCPs include 15% (174 PCPs) from increased utilization due to aging, 75% (845 PCPs) due to population growth, and 8% (94 PCPs) due to a greater insured population following the Affordable Care Act (ACA).

Pressures from a growing, aging, increasingly insured population call on Nevada to address current and growing demand for PCPs to adequately meet health care needs. Policymakers in Nevada should consider strategies to bolster the primary care pipeline including reimbursement reform, dedicated funding for primary care Graduate Medical Education (GME), increased funding for primary care training and medical school debt relief.

Highlights: Nevada’s Projected Primary Care Physician Demand

Additional PCPs Required by 2030

1,113

Or, 77% of current workforce, due to an aging, growing and increasingly insured population.

Current Primary Care Physician Workforce

1,428

The state’s PCP ratio of 1883:1 is greater than the national average of 1463:1.

Potential Solutions –
Bolster the Primary Care Pipeline

- Physician reimbursement reform
- Dedicated funding for primary care Graduate Medical Education (GME)
- Increased funding for primary care training (Title VII, Section 747)
- Medical school student debt relief
